

March 15, 2004

Dear Customer:

Kodak is announcing plans to discontinue manufacturing all EASTMAN EKTACHROME Color Reversal Motion Picture Films by year-end 2004.

This decision has not been taken lightly and is brought about by two fundamental reasons. Recent legislation will ban the use of several of the component parts that are used in these products and falling sales volume due to lack of demand, unfortunately prohibits the ability to enter an R & D program to re-engineer these products. That would be too costly and take too much time. You can imagine, we are very disappointed to have to make this decision.

As a result, the product discontinuance schedule is as follows:

**Immediate:**

- EASTMAN EKTACHROME High Speed Film 400T SO-251 (ESTAR)
- EASTMAN EKTACHROME Film 160D 2239 (ESTAR)

**Within six months:**

Depending on customer demand, we anticipate that supplies of the following films will be available for approximately four to six months:

- EASTMAN EKTACHROME Film 160D 7239
- EASTMAN EKTACHROME Film 125T 7240
- EASTMAN EKTACHROME Print Film 7399 and 5399

**By year-end:**

Production of the following high speed EKTACHROME Color Reversal Motion Picture Films will cease by year-end. Depending on customer demand, we anticipate that supplies of the following films will be available for approximately three months:

- EASTMAN EKTACHROME Film 400T 7250
- EASTMAN EKTACHROME Film 400D 7251
- EASTMAN EKTACHROME Film 400D 2253 (ESTAR)

We are aware that these actions will cause you some inconvenience and for that, we apologize. Your Kodak Sales representative will be contacting you very shortly to discuss alternative products that will help to fill your imaging needs.

Thank you.

Sincerely,

Bob Mayson  
General Manager, Image Capture Product Group  
Vice President, Entertainment Imaging
